

Overview of Photographic Material

The Klimahaus® management supplies photographic material free of charge for editing purposes only.

The picture credits must include the name of the photographer and Klimahaus® Bremerhaven 8° Ost, e.g. Marcus Meyer / Klimahaus® Bremerhaven 8° Ost. Please contact us for high resolution images.

Exterior views

The Klimahaus® Bremerhaven 8° Ost: The flowing shape of the 125m long and almost 30 m high building in Bremerhaven's new tourist quarter "Havenwelten" resembles a cloud or a stylised ship. This unique knowledge and adventure world is concerned with the highly topical issues of climate and climate change.

Journey

Switzerland

In Switzerland the path leads through craggy rock formations, to the summit cross and into the glacier cave which is actually frozen. It smells of alpine meadows, cow and hay.

Photo: Jan Rathke

Sardinia

Visitors move around the second stop of the journey, Sardinia, as if they had shrunk to the size of an insect amongst oversized insects and blades of grass. The butterfly effect is put to the test in the dented can.

Photo: Laurence Delderfield

Niger

In arid heat of up to 35°C (98°F), visitors can experience the expanses of desert and the daily life of the Tuareg in Niger.

Photos: Florian Müller

Cameroon

In this riverscape, visitors will come across exotic fish which can be observed from a hanging bridge. A Klimahaus® employee caught most of the fish himself in Cameroon and transported them to Bremerhaven. The Klimahaus® animal keepers are now breeding the next generation.

Antarctica

The polar climate of Antarctica means ice cold – in this exhibition area, the walls and the floor are covered with real ice and the temperatures are below -6°C.

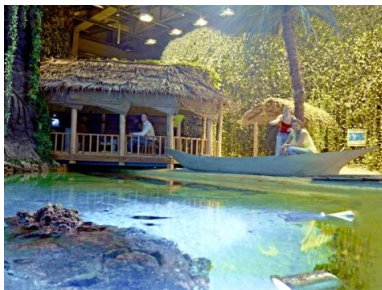

Photo: Florian Müller

Even though the visitors really get to feel the cool climate, they do not need a scarf - after a short walk, they will reach the warmth of the polar station, which is rebuilt true to the original.

Photo: Florian Müller

Samoa

Through a green botanical canyon, visitors reach a sandy beach. More than 30° C, warm sand and palm trees invite the visitors to linger. A staircase leads to the aquaria of the exotic underwater world of a fringing reef.

Photo: Marcus Meyer

Fringing reef Samoa

Visitors can explore the exotic underwater world of a fringing reef. More than 200 different animal species and more than 1,000 creatures live in the aquaria and terrariums of the Klimahaus®.

Photo: Florian Müller

Alaska

St. Lawrence Island, Alaska: An Island in change, between tradition and modern spirit. The inhabitants of St. Lawrence, the Yupik, are one of the few people on Earth that are legally allowed to hunt for whales for food.

Photo: Florian Müller

Hallig Langeness

On the Hallig Langeness, visitors experience the North Sea tides and what it means to live with "land unter".

Photo: Jan Rathke

Typical fish of the German coast line area live in the North Sea Barrel.

Perspectives

Perspectives

The Perspectives trace the tracks of climate change from natural changes in the Earth's history up to anthropogenic climate change.

Photo: Florian Müller

Explorer Desks

Explorer desks invite the visitors to get a feel for a scientist's everyday life.
